

## MATHS LAB

*Mathematics is not about numbers, equations, computations, or algorithms: it is about understanding.*

*-William Paul Thurston*

*Maths lab is a place for students to discover Mathematics by doing. Appealing activities for a wide range of students with the goal of generating interest is what our maths lab is meant for. The lab is well equipped to help the students to visualize, manipulate and build up logical reasoning. It provides an opportunity to make conjectures and generalize the observed patterns. The maths lab of our school has been designed to meet the needs of students by making a better understanding from models, projects, games etc. It is a self explanatory lab with informal exploration where our students come and enjoy & enhance their mathematical skills.*
